

GENERAL INFORMATION

Course information	
Name	Machine Learning
Code	DOI-MIC-515
Degree	MIC, MII, MIT
Year	
Semester	Spring
ECTS credits	6 ECTS
Type	Elective
Department	DOI
Area	
Coordinator	Antonio Muñoz

Lecturer	
Name	Antonio Muñoz
Department	Electronics, Control Engineering and Communications
Area	
Office	D-515
e-mail	amunoz@comillas.edu
Phone	915 406 147
Office hours	Ask for an appointment by email.

Lecturer	
Name	José Portela
Department	Quantitative Methods

Office hours	Ask for an appointment by email.

DETAILED INFORMATION

Contextualization of the course

Contribution to the professional profile of the degree

The purpose of this course is to provide students with a fundamental understanding and an extensive practical experience of how to extract knowledge from an apparently unstructured set of data.

By the end of the course, students will:

- Understand the basic principles behind Machine Learning.
- Have practical experience with the most relevant Machine Learning algorithms.
- Have well-formed criteria to choose the most appropriate techniques for a given application.

Prerequisites

Students willing to take this course should be familiar with linear algebra, basic probability and statistics, and undergraduate-level programming. Previous experience with R programming language desired although not strictly required.

CONTENTS

Contents
CHAPTER 1: INTRODUCTION
<ul style="list-style-type: none">1.1. Data Mining & Machine Learning1.2. The learning process1.3. Types of Machine Learning
CHAPTER 2: CLASSIFICATION METHODS
<ul style="list-style-type: none">2.1. The classification problem2.2. Logistic Regression2.3. Discriminant analysis2.4. K-Nearest Neighbors2.5. Decision Trees2.6. Support Vector Machines2.7. Multilayer Perceptrons for classification
CHAPTER 3: REGRESSION METHODS
<ul style="list-style-type: none">3.1. The regression problem3.2. Linear regression. Model selection and regularization.3.3. Polynomial regression3.4. Splines3.5. Generalized Additive Models3.6. Multilayer Perceptrons for regression3.7. Radial Basis Function Networks
CHAPTER 4: TIME SERIES FORECASTING
<ul style="list-style-type: none">4.1. Stochastic Processes4.2. Exponential Smoothing4.3. Decomposition methods4.4. ARIMA models4.5. Dynamic Regression models

CHAPTER 5: UNSUPERVISED LEARNING

- 5.1. Probability Density estimation
- 5.2. Dimensionality Reduction Methods
- 5.3. Clustering and Vector Quantization
- 5.4. Self-Organizing Feature Maps

COMPETENCES AND LEARNING OUTCOMES

Competences and Learning Outcomes	
Competences	
General Competences	
CG3.	The capability of adapting to new theories, methods and changing engineering situations based on a sound technical training.
CG4.	The capability of solving problems with personal initiative, efficient decision making, critical reasoning and transmitting technical information in the engineering world.
CG5.	The capability of conducting measurements, calculations, assessments, studies, reports, planning, etc.
CG10.	The ability to work in a multilingual and multidisciplinary environment.
Basic Competences	
Specific Competences	
Learning outcomes	
RA1.	The student understands the basic principles behind Machine Learning.
RA2.	The student has a practical experience with the application of the most relevant Machine Learning algorithms.
RA3.	The student has well-formed criteria to choose the most appropriate techniques for a given application.

TEACHING METHODOLOGY

General methodological aspects

Each session will combine theory and practice. The teacher will explain the basics of the subject and will go in depth in the more important issues with illustrative examples. The students will be grouped in pairs in order to put in practice the proposed methods and techniques using software tools in a collaborative way.

In-class activities

1. **Lectures and problem-solving sessions (28 hours):** The lecturer will introduce the fundamental concepts of each chapter, along with some practical recommendations, and will go through worked examples to support the explanation. Active participation will be encouraged by raising open questions to foster discussion and by proposing short application exercises to be solved in class either on paper or using a software package.
2. **Lab sessions (28 hours):** Under the instructor's supervision, students, divided in small groups, will apply the concepts and techniques covered in the lectures to real problems and will become familiar with the practical application of the most relevant algorithms using software tools and libraries.
3. **Assesment (4 hours)**

Off-class activities

1. **Personal study** of the course material and resolution of the proposed exercises (60 hours)
2. **Lab session** preparation, analysis of results and reporting (60 hours).

ASSESSMENT AND GRADING CRITERIA

Assessment activities	Grading criteria	Share
Mid-term exam	<ul style="list-style-type: none">• Understanding of the theoretical concepts.• Application of these concepts to problem-solving.• Critical analysis of numerical exercises' results.	15%
Final exam	<ul style="list-style-type: none">• Understanding of the theoretical concepts.• Application of these concepts to problem-solving.• Critical analysis of numerical exercises' results.	35%
Lab sessions and reports	<ul style="list-style-type: none">• Application of theoretical concepts to real problem-solving.• Ability to use and develop data mining and machine learning software.• Attitude and effort: Initiative and proactive work will be encouraged.• Written communication skills.	50%

GRADING AND COURSE RULES

Grading

Regular assessment

- **Theory** will account for 50%, of which:
 - Mid-term: 15%
 - Final exam: 35%
- **Lab** will account for the remaining 50%

In order to pass the course, the mark of the final exam must be greater or equal to 4 out of 10 points.

Retakes

Lab practice marks will be preserved.

In addition, all students will take a final exam. The resulting grade will be computed as follows:

- Final exam: 50%
- Lab practices: 50%

As in the regular assessment period, in order to pass the course, the mark of the final exam must be greater or equal to 4 out of 10 points. Otherwise, the final grade will be the lower of the two marks.

Course rules

- Class attendance is mandatory according to Article 93 of the General Regulations (Reglamento General) of Comillas Pontifical University and Article 6 of the Academic Rules (Normas Académicas) of the ICAI School of Engineering. Not complying with this requirement may have the following consequences:
 - Students who fail to attend more than 15% of the lectures may be denied the right to take the final exam during the regular assessment period.
 - Regarding laboratory, absence to more than 15% of the sessions can result in losing the right to take the final exam of the regular assessment period and the retake. Missed sessions must be made up for credit.
- Students who commit an irregularity in any graded activity will receive a mark of zero in the activity and disciplinary procedure will follow (cf. Article 168 of the General Regulations (Reglamento General) of Comillas Pontifical University).

WORK PLAN AND SCHEDULE¹

In and out-of-class activities	Date/Periodicity	Deadline
• Mid-term exam	Session 15	-
• Final exam	Last week	-
• Lectures + Lab sessions	Weekly	-
• Review and self-study of the concepts covered in the lectures	Weekly	-
• Lab preparation and reporting	Weekly	One week after the end of each lab session

STUDENT WORK TIME SUMMARY			
IN_CLASS HOURS			
Lectures	Lab sessions	Assessment	
28	28	4	
OFF_CLASS HOURS			
Self-study	Lab preparation and reporting		
60	60		
ECTS credits:			6 (180 hours)

¹ A detailed work plan of the subject can be found in the course summary sheet (see following page). Nevertheless, this schedule is tentative and may vary to accommodate the rhythm of the class.

IN-CLASS ACTIVITIES						
Session	Date	h/s	SESSION	THEORY	LAB	ASSESSMENT
1	10-jan	2	Introduction I	Introduction to Machine learning	Lab Practice 1.1: Introduction to R for Machine Learning	
2	15-jan	2	Introduction II		Lac Practice 1.2: Introduction to R for Machine Learning	
3	17-jan	2	Classification I	The classification problem. Logistic regression.		
4	22-jan	2	Classification II		Lab Practice 2.1	
5	24-jan	2	Classification III	Discriminant analysis. KNN	Lab Practice 2.2	
6	29-jan	2	Classification IV	Decision trees	Lab Practice 2.3	
7	31-jan	2	Classification V	SVM	Lab Practice 2.4	
8	05-feb	2	Classification VI	MLP	Lab Practice 2.5	
9	07-feb	2	Classification VII		Hackaton	Assignment 1
10	12-feb	2	Regression I	The regression problem. Linear Regression.	Lab Practice 3.1	
11	14-feb	2	Regression II	Model selection and Regularization	Lab Practice 3.2	
12	19-feb	2	Regression III	Polynomial Regression, Splines, GAMs	Lab Practice 3.3.	
13	21-feb	2	Regression IV	MLP, SVM	Lab Practice 3.4	
14	26-feb	2	Regression V		Hackaton	
15	28-feb	2	Mid-term exam I			Mid-term exam
16	05-mar	2	Forecasting I	Stochastic Processes. Decomposition methods	Lab Practice 4.1	
17	07-mar	2	Forecasting II	ARMA	Lab Practice 4.2	
18	12-mar	2	Forecasting III	ARIMA	Lab Practice 4.3	
19	14-mar	2	Forecasting IV	SARIMA	Lab Practice 4.4	
20	19-mar	2	Forecasting V	Dynamic Regression models I	Lab Practice 4.5	
21	21-mar	2	Forecasting VI	Dynamic Regression models II	Lab Practice 4.6	
22	26-mar	2	Forecasting VII	Nonlinear models	Lab Practice 4.7	
23	28-mar	2	Forecasting VIII		Hackaton	Assignment 2
24	02-abr	2	Density estimation	Parametric & Non-parametric methods	Lab Practice 5.1	
25	04-abr	2	Dimensionality reduction	PCA. ICA.	Lab Practice 5.2	
26	09-abr	2	Clustering I	Hierarchical & partitional clustering	Lab Practice 5.3	
27	11-abr	2	Clustering II	Vector Quantization. Neural Gas	Lab Practice 5.4	
28	23-abr	2	Self Organising Maps	SOM	Lab Practice 5.5	
29	25-abr	2	Course summary
